

Custom Cabinets

In the realm of renovations there is a competitive market for customized products. One of the most customized items in the household is, cabinets. Not only are cabinets useful to store items in the kitchen, they can be customized and used throughout the household, even in the garage. [REDACTED] delivers quality products to their consumer and has searched for the best quality cabinet manufacture to ensure that customers are receiving esthetically pleasing, durable cabinets that are cater to individual needs to maximize space.

The Demand for Customized Cabinets

Every house hold contains items that look like clutter to the naked eye and takes up much needed space. The best solution to this issue is to install custom cabinets to fit items that should remain unseen to the occupants of the dwelling. Custom cabinetry is the best system to maximize space in the household because cabinets can be built for any width and can be constructed from the floor to the ceiling. Custom cabinets can also be used to conceal items that aren't used often, such as spare mattresses and appliances.

The demand for customized cabinets extends further than the kitchen. With the popular open concept design style in construction fashion, it is harder to maximize storage space in a smaller area. Custom cabinets are used to store everything from small appliances to queen sized beds.

It is important for construction companies to understand the needs of their consumer and supply the demand for quality products. This is especially true when dealing with renovation companies. [REDACTED] understands that when renovating the household, there is always a need for maximizing space while still being able to deliver esthetically pleasing products.

Choosing a Custom Cabinet Manufacturer

There are many large semi-custom cabinet manufacturers that offer mass produced identical cabinet types. These cabinets have limitations on the length, width and depth of their components. This becomes a problem when clients want differing styles, customizations and options. [REDACTED] understood the needs of their clients and sought out a custom manufacturer who could deliver a quality constructed cabinet at a fair market price.

After working with three different local skilled craftsmen to build custom un-finished products a problem arose. It was seemingly less costly for the consumer if the company got custom built cabinets that needed to be finished on site. Although getting un-finished cabinets was the alternative [REDACTED] was searching for, the on-site painting posed another issue. The finished quality and air pollution from the site painted cabinets was not up to the quality standards that [REDACTED] delivers to their customers.

Being a renovation company, it is important to note that most customers who are looking for cabinets want to be able to customize their products to suit their needs. When purchasing cabinets from big box stores such as Lowes or Home Depot, it is hard to customize the cabinets for the needs of the clients especially if the client wants an un-common finish.

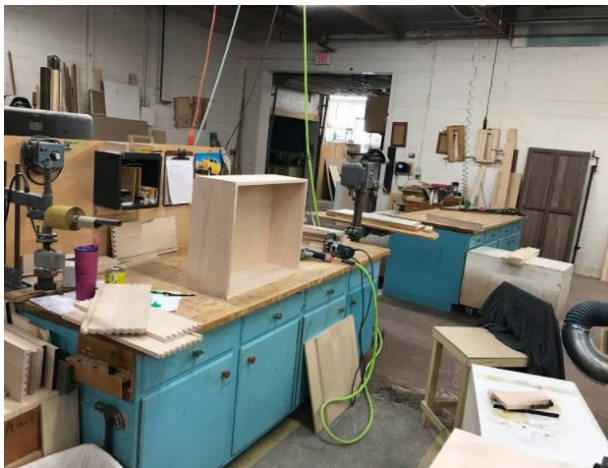

Finishing cabinets while a client is occupying the space is nearly impossible because of the chemicals in the finishing components. It is bothersome and even dangerous to inhale fumes from paints and stains especially on the initial installation day. If a dwelling is unoccupied finishing a cabinet on site is very possible unless the dwelling is in a condominium.

Another issue arose with condominiums prohibiting oil based finishes. This limited the choices of finishes and increased the probability of unsightly cracking and imperfections. Nearby neighbors were also affected by the aromas of the chemicals. To solve this dilemma [REDACTED] went on a search for a custom cabinet manufacturer that was up to their quality standards.

[REDACTED] noticed that for the cost of quality painters and quality materials, they could get custom cabinets built. They began their search for fully custom finished products by looking for the following qualities in a custom cabinet manufacturer:

1. The superior quality of the construction of the cabinets
2. The quality of the finishes for the cabinets
3. The customizability of the cabinets

Custom Cabinet Manufacturers

The search for a custom cabinet manufacturer entailed some research. Most construction companies tend to look for the best price points. This leads them to co-ordinate with a manufacturer located overseas. [REDACTED] sought out a manufacturer in the U.S. to not only ensure that they support U.S. based businesses, they also wanted to find a cabinet manufacturer who would make cabinets that maintain a standard of quality.

The search for a custom cabinet supplier lead [REDACTED] to the cabinet capital of the United States, Lancaster County Pennsylvania. Lancaster County is known to be the home of the Amish, the Mennonites, the Brethren and the other traditional people of the Pennsylvania Dutch Country.

These traditional woodworkers, craft furniture and cabinets that have been known for their quality wood craftsmanship for centuries. The finished products of these manufacturers have also been known to outlast the finished products of large cabinet manufacturing plants.

[REDACTED] decided to choose a manufacturer who shipped customized finished products. The products had to be durable and painted in a controlled environment to ensure that odors would not affect the occupants or nearby occupants of the dwelling. The search lead the company to choose a cabinet manufacturer who used old-style craftsmanship with precision.

Cabinet Manufacturer

████████ cabinet manufacturer of choice, is a company that was founded in 1962. The company was created by three co-founders, two of whom had joinery experience dating back to the age of ██████████. At the onset of the company there was a factory and a retail store. Eventually the retail store was bought out by their sister company and one of the partners ██████████, left the trio to open his own cabinet door business.

████████ opened a cabinet door company called ██████████. ██████████ makes kitchen cabinet doors for ██████████ manufacturer as well as other cabinet manufacturers. These doors are crafted from the finest materials and mesh perfectly with the quality of craftsmanship that ██████████ is known for.

Today, ██████████ manufacturer continues to make cabinets the traditional way. This is the signature of this company's cabinetry.

The Difference

██████████ manufacturer of choice, creates face frame and full access cabinets made from quality ply-wood veneers and hardwoods. This sets them apart from other manufacturers whose doors are set out of the frame. The finishes and adhesives on their cabinets are formaldehyde free, which ensures that there are no lingering chemical odors.

The cabinets offered from this company can accommodate virtually all types of modifications and additions. Even if the desired product is not available, the manufacturer will do their best to accommodate their consumers in any way they can.

The manufacturer employs 20 people to aide in the furniture making process. The cabinets are all manufactured in a large rectangular warehouse. The process begins in a line formation that starts from the left side of the ware house and continues to the right. There are several machines that cut the cabinets at intervals of the assembly line throughout the factory. All precision cuts are made from Computer Numerical Control (CNC) Machinery, but the joinery is all done by hand.

What Makes These Cabinets Unique?

██████████ cabinets are crafted from the finest materials and in a manner, that is unique from other cabinet manufacturers. Most manufacturers use dowels in the structure of their cabinets. The

dowels are used in the joints of cabinets to join pieces together. Dowels are often seen in modern day big box store bought, book shelving. They are cylindrical pieces of wood that fit into holes in ply wood as joiners.

██████████ manufacturer differs from many manufacturers in that there are no dowels used in their joinery. Tongue and groove joints are used to construct their cabinets. This method ensures that the cabinets are sturdy and capable of enduring more weight and tension than dowel joined cabinets.

██████████ ensured that the manufacturer's cabinets are stylish, esthetically pleasing and are completely customizable. There are over 10 different types of wood that are available for cabinet making and if you're interested in a special species of wood that isn't typically used, they will strive to find the wood as a special request.

If you're looking for special effects for your cabinet finishes, you'll be content with ██████████ cabinets. We offer the following types of special effects:

- Antiquing
- Aging
- Distressing
- Worming
- Worn

Variations of these special effects are also available.

██████████ Collaboration with Our Manufacturer

██████████ is dedicated to excellence. Every customer has individual needs and those needs shouldn't stop at cabinet space. Whether the client would like to put pots in their cabinets or a queen-sized bed, ██████████ ensures that the needs of the clients are met in a timely manner with quality materials.

The collaboration of ██████████ with the cabinet manufacturer is seamless. The two companies work well together to ensure that only quality materials are used in the manufacturing process. This ensures that the finished products will not only be esthetically pleasing but also durable enough to be backed by a warranty. Each company works hard to ensure that their consumers are

satisfied with the finished cabinetry. For a unique look that is backed by quality there is no better choice than to trust [REDACTED] for all your cabinet making needs.
